

New for 2011

The Xpert

All Diamond Grinding and Polishing unit.

The Xpert is designed to be a more affordable 6" Diamond Cabbing unit, yet still to be tops in quality. It uses the same wheel spacers as the Titan, so you get a generous 1-3/4" space between wheels.

A Pixie pan at the top of the machine is very handy for placing your stones.

One flex stem Moffatt lamp is included and there is an extra mounting hole for either a second lamp or a magnifier.

Another great new feature is that you can have, not the usual six, but seven 6" diamond wheels mounted at once.

We provide the same six wheels that are standard on a Genie, 80 and 220 grit Galaxy wheels and 280, 600, 1200 and 3000 grit Nova resin bond wheels. But there is also room on the left end of the arbor shaft for you to add a seventh wheel of your choice. This extra wheel could be a Hex wheel for fast shaping, a convex carver for fancy shapes or an extra Nova wheel, either coarse or fine. We provide the necessary left hand adapter so all you would buy would be the extra wheel, and of course that could come later as the usual six wheels come with the machine.

Both the left and the right end wheels are mounted on adapters that allow them to be spun on or off by hand with no tools required. You can use as many special wheels as you want simply by getting extra adapters to mount them on.

Also there is room on the left end of the shaft to mount a 6" diamond or polishing lap having a 1/2" arbor hole.

On the right you can add any of the various polishing pads that have a 1/4-20 mounting screw.

The Xpert uses the same spra-mist coolant supply as the Genie and also uses two Genie pans that can be easily slid left or right as needed during use, and are instantly removable for cleaning.

The one inch diameter stainless steel arbor shaft is mounted in double sealed ball bearings and is belt driven by a 1/3 hp motor having built-in overload protection.

The power cord includes a built-in electric shock protection device (115 volt version only).

Construction is of heavy gauge steel. Areas exposed to water are both galvanized and powder coated!

Bolts exposed to water are stainless steel.

Order:

500-XP-100 115 volt 60 hz \$1875.00

500-XP-100X 230 Volt 50 hz \$1995.00
